

STEC STONE BURIER

CLEAR SURFACE DEBRIS AND STONES BY TILLING THEM & LEAVING A CLEAN, FINE, AND LEVEL LAYER OF TOPSOIL ON TOP IN A SINGLE PASS.

Heavy duty machine suitable for the most demanding conditions. This versatile machine is built with components of the highest quality, making it suitable for intensive work in large areas.

The reverse rotating rotor tills the soil, pushing it into the heavy duty screening tinned, leaving the finely screened top soil on the surface while burying rocks and other debris.

Rocks and other debris are buried in the hole created and the screened soil is then filled in from the leveling bar while also taking down high spots and filling low spots.

The roller then lightly packs the newly blended and tilled soil down, making the perfect sod or seed bed.
