

ROOG SEEDER

PERFORM YOUR OVER-SEEDING OPERATIONS OPTIMALLY.

The Rotadairon ROOG Seeder is a slit seeder capable of putting out a wide variety of seed. Each disc and injector unit produces a clean cut and a precise deposit of seeds. This unique design allows us to offer you a compact machine with a limited weight allowing you to run this machine on a more compact tractor to get in to tighter spaces.

The cutting of the groove is carried out by sharp discs, arranged on independent blocks that follow the profile of the ground. These discs penetrate the soil effectively and are less affected by variations in soil hardness than double-disc overseeding equipment. They also help to cut through and weaken existing weeds – a specific benefit offered by the ROOG 150.60 – thereby making a further contribution to achieving an optimal playing surface or course. The injectors place the seeds precisely in the furrows.

Model

ROOG 150.60

Working Width	59"
Working Depth	0-.75"
Distance Disc to Disc	2.25"
Weight	1,466lbs
Power Requirement	> 30 hp

Standard Features:

- High resistance stainless steel discs
- Linkage: standard 3-point Cat. 1 & 2
- Precise seed placement by the disc/injector unit
- Clean cut by sharp discs
- The Ventilated Spline-slit Seeder allows for exact seed flow rates
