

GKB COMBINATOR

INNOVATIVE AND EFFECTIVE TOOL FOR REMOVING UNWANTED TURF, FRAISE MOWING OR REMOVING INFILL ON SYNTHETIC FIELDS.

The GKB Combinator is the ultimate tool for turf removal, fraise mowing, verticutting and synthetic infill removal. The Combinator has the capability to remove up to 2" of unwanted material in a single pass. This allows you to run a clean and efficient operation, totally removing the organic matter and leaving a clean and level surface. This is the only step needed before re-seeding or laying sod. The Combinator rotor can handle 4 types of blades on its rotor: L blade (fraise & turf removal), hybrid chisel (turf removal), 3 legged (hybrid/stitched field fraise), and verticut blades. The rotor can also be exchanged for a brush for removing infill from synthetic fields.

Fraise mowing is a thatch management practice founded in the Netherlands in the mid 1990s. The GKB Combinator was designed, built and perfected by the family that created the first ever fraise mower.
