

GKB DEEP CLEAN

GET MORE THAN JUST SURFACE LEVEL CARE WITH THE GKB DEEP CLEAN.

Thorough cleaning of synthetic fields is crucial to protecting the life of your investment and ensuring the safety of the players. The tractor-mounted GKB Deep Clean effectively lifts the infill, removes dirt, skin, hair, and dust, and returns the clean infill back to the surface to restore the play and visual qualities of your artificial surface – whether that's a tennis court or a football field.

Using the knowledge and experience gained across GKB's contracting division, the Deep Clean was developed with four key requirements in mind; high speed, reliability, quality of finish and cost effectiveness. All of that is combined with GKB's infamous quality engineering to create a long-lasting solution to surface cleaning.
