

GKB ECODRESSER

AERATE AND BRING YOUR ALREADY AMENDED SOIL TO THE TURF IN ONE PASS.

Want to increase drainage and topdress your field with soil already in your cultural practice program? The GKB Ecodresser is the solution. The Ecodresser comes with a roller with cutting discs that lead the way for the hooks to pull the soil up onto the dresser belt. The soil then comes out the back and is distributed along the surface as the machine moves forward. The reused soil is an economical way to increase your drainage and topdress with the soil you already have in your program.

When games are played on wet ground, the field can become damaged and compacted, leading to issues with grass growth and recovery. It can weaken the surface and reduce its natural ability to drain. The blades of the Ecodresser cuts through the ground to depths of up to 8", breaking through the 'crust' and bringing the finer soil back to the surface.
