

GKB SANDFILLER

VERTICUT, COLLECT, AND BACKFILL WITH SAND ALL IN A SINGLE PASS.

The Sandfiller is the ultimate machine for organic material removal, with the ability to verticut, collect waste material and backfill with sand in one pass. This machine is ideally suited for golf course greens, tees, and approaches. With up to 10% organic removal, spongy greens and thatch are a thing of the past. Easy cleanup and minimal surface disruption allows you to have a large impact on your courses conditions with minimal down time.

Use the Sandfiller to firm up your greens and maintain drainage. With the Sandfiller you can scarify, sand and, if necessary, reseed in the same pass. With the Sandfiller you can do this on your own, while other methods require up to 6 people.
